# Linear Sorter

## LS 4

**Single Line Linear Calibrating  
with Lateral Bench.**

## DESCRIPTION

The Sorter Line series S4 was designed to satisfy the needs of small fruit producers, whose production requirements are reduced and for who cost is very important. The Machine in version only by weight is realized in Basic or Extended form; as an there is a variant with the possibility of separating it for Diameter or Color in basic form, so this making it possible to select some fruits with the Electronic Diameter technique. The compact form allows the placement of the system in tight spaces, but also to equip it with some accessories to guarantee an increase of production and /or logistics. The machine control is done through an electronic panel to control all inverters with the possibility of connecting the panel to Computer, Tablet and Smartphone through the wireless connection. The machine has been developed to obtain an installation suited to the logistics space of each customer, with reduced technical intervention. The system was built completely to optimize energy consumption.

## FEATURES

It's a linear calibrating to select round fruit.

**The system is managed by weighing made by our production.**

- Number of Lines: 1
- Number of Exits: 6-18 max
- Max speed: 8.5 rollers / sec.
- Productivity max: 6.5 Fruits / sec. For each line
- Productivity Typ: 34.56 Q / h (peach, apple weight med. 160G)
- Productivity Typ: 15.12 Q/ h (apricot, weight med. 70g)

**Productivity is calculated taking care that the sorting is never stopped on full exits.**
